## 1329.0.55.001 - Vineyards Estimates, Australia, Preliminary, 2002-03

Previous ISSUE Released at 11:30 AM (CANBERRA TIME) 15/10/2003

### Summary

#### Main Features

Preliminary estimates show the total production of grapes decreased by 16% for the 2003 harvest to 1.5 million tonnes, compared with the 2002 harvest. The largest producing state, South Australia, recorded a decrease in production, down by 10% to 626,500 tonnes. The next largest producing states recorded large decreases: Victorian production decreased by 24% to 391,600 tonnes; and New South Wales production decreased by 17% to 374,000 tonnes.

The total area of vines reported increased marginally from the 2002 season, to a record 159,400 hectares in the 2003 season. Increases were reported in South Australia (up 3% to 68,800 hectares) and Western Australia (up marginally to 11,500 hectares) with falls reported in every other state and territory.

^ data subject to sampling variability between 10% and 25%

(a) Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Varietal information will be available in **Australian Wine and Grape Industry** (cat. no. 1329.0 - due for release in January 2004). (b) Yield represents the quantity of grapes produced per hectare of bearing vines.

# About this Release

## ABOUT THIS RELEASE

This release contains preliminary estimates for major items only from the vineyards collection.

This release contains preliminary estimates for major items only from the vineyards collection. The availability of this data was previously signalled by the release of preliminary estimates from the ag surveys. However the vineyards data is now available before the main ag commodities and this release enables it to be made publically available earlier than other ag commodities.

This release contains preliminary estimates for major items only from the vineyards collection.
